

In the Terminal of the Project directory, run:

**npm start**

then open a new terminal in the Project directory and run:

**npm json-server --watch tasks/tasks.json --port 8000**

(In this project we are saving the Employee Tasks as JSON file in the local JSON Server which is running on Port <http://localhost:8000/tasks>)

the project is running on the port <http://localhost:3000/>

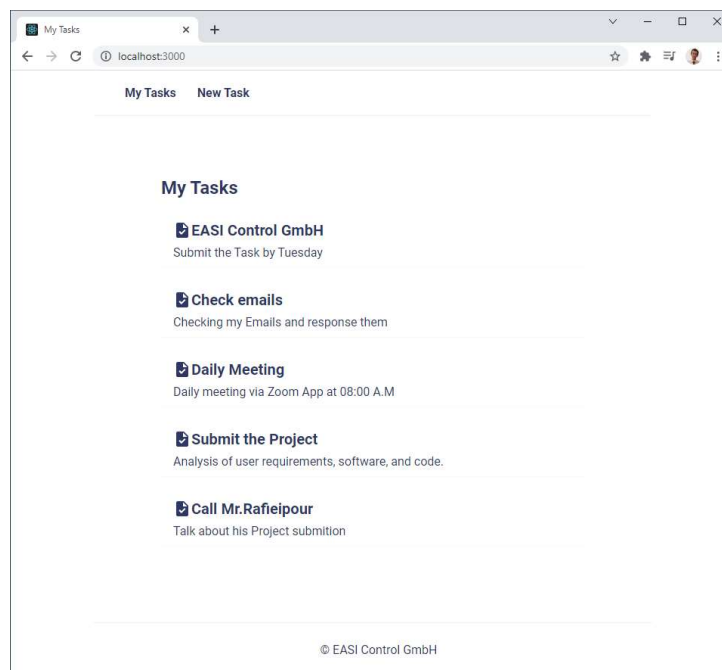

Photo 1

Click on the **New Task** and fill the Form and then Click on **Create Task**. The right side of the Photo 2 shows the JSON server as Backend.

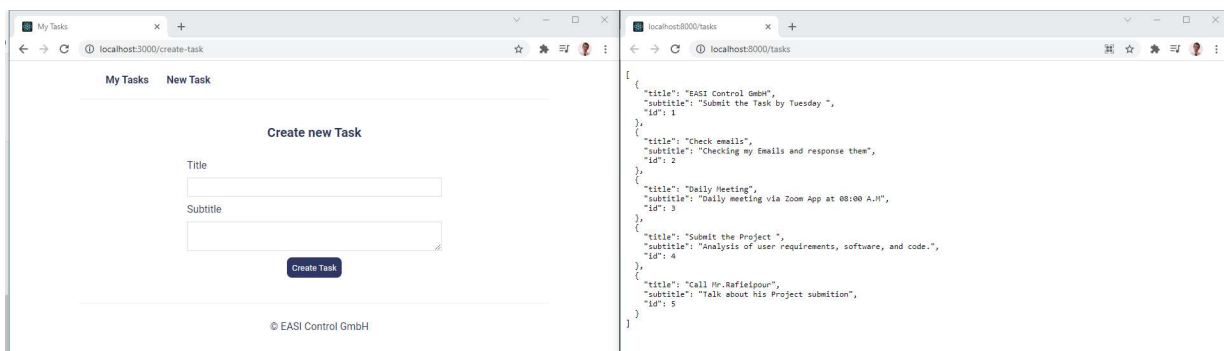

Photo 2

After filling the form and validation Form you will see the following message and the task are added in the Server and the task is listed in **My Tasks** section.

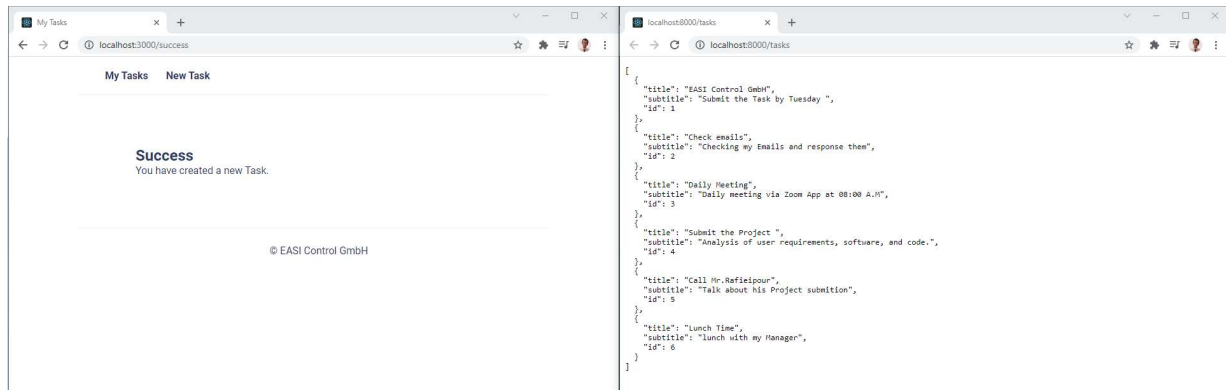

Photo 3

By Clicking on My Tasks, you will see the listed Tasks.

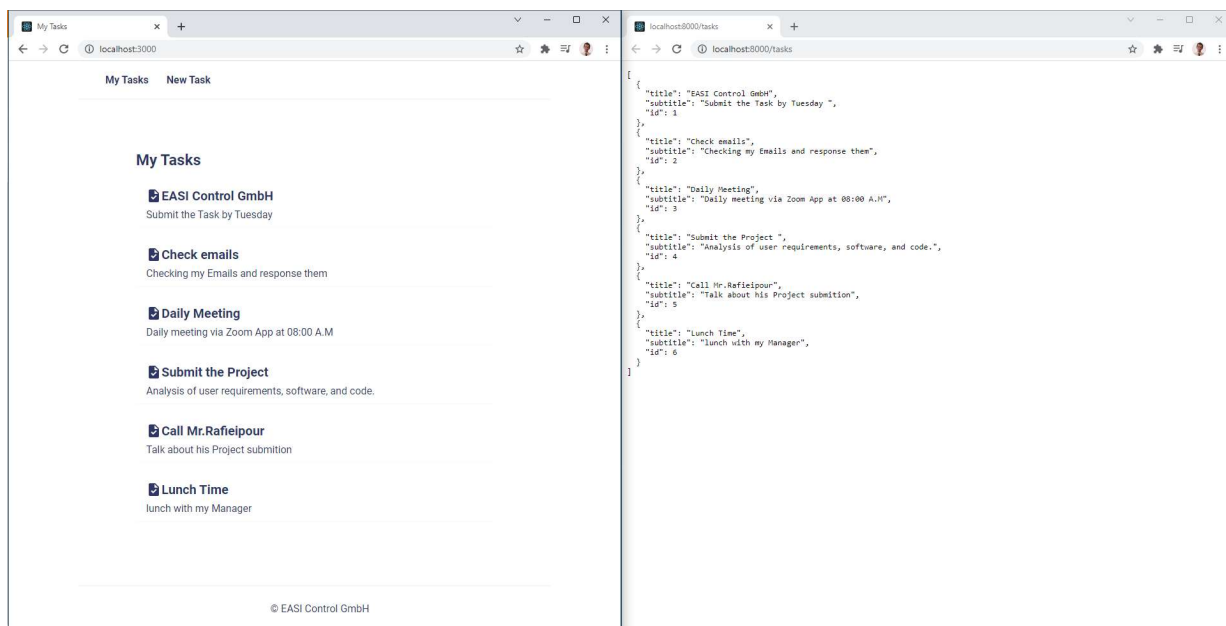

Photo 4

The Application are Responsive by 300\*650 to 450\*650
